

As a not logged in user, I want to quickly be able to search between two or more medications and see if there are any adverse reactions. This is because I want to not die if I'm going to take these medications. I want to be able to use a search bar and have it give me a list of medications, because I might misspell something or not remember exactly how to spell it. I want to visually see which medications have the interaction and maybe know from a reliable source why they're dangerous together. I want to be able to maneuver the website easily through simple buttons and instructions.
